

George Street Booking Manager Admin Guide

This guide explains how the game works and how to configure it for strong, stable results.

Recommended starting content size:

- Bands: 6 to 10
- Venues: 4 to 6

1. How The Game Works (Admin View)

Each in-game day, players:

1. Choose 1 venue.
2. Book 1 to 3 bands.
3. Add optional promo packages.
4. Run the show.

Core show logic:

- Attendance uses band draw, venue genre fit, promo boosts, reliability, and random noise.
- Revenue is ticket revenue plus concessions when the room is at least 75 percent full.
- Costs are venue rent plus band fees plus promo spend.
- Result updates player money, fame, scene cred, and fan trust.

Important mechanics:

- Ticket price scales with venue prestige.
- Sellout and high attendance give larger fame gains.
- Poor attendance and heavy losses can reduce stats.
- Featured Guest bonus applies only when the featured guest is in the booked lineup.
- Scene events are random and can add or subtract stats/cash.
- Season end is controlled by Weeks Per Season and Days Per Week.

2. Admin Setup Workflow (Best Practice)

Use this sequence in `/admin/game` :

1. Load Design

- Enter admin secret.
- Click `Load Design` .

2. Season Controls First

- Set season length and win thresholds before balancing content.
- Suggested starter values:
 - Weeks Per Season: 4
 - Days Per Week: 5
 - Win Threshold Fame: 90
 - Win Threshold Scene Cred: 25
 - Win Threshold Fan Trust: 55

3. Build Bands (6 to 10)

- Keep a spread of low, mid, and high power acts.
- Suggested distribution for 8 bands:

- 2 low draw / low fee
 - 4 mid draw / mid fee
 - 2 high draw / high fee
- Suggested stat ranges (safe defaults):
 - Draw: 45 to 170
 - Fee: 35 to 210
 - Reliability: 60 to 90
 - Crowd Energy: 45 to 90

4. Build Venues (4 to 6)

- Include progression tiers so players can grow:
 - 1 small room
 - 2 mid rooms
 - 1 to 2 high-capacity or high-prestige rooms
- Suggested venue ladder:
 - Small: capacity 70 to 120, rent 25 to 60, prestige 1
 - Mid: capacity 140 to 260, rent 60 to 130, prestige 2 to 3
 - Large: capacity 300 to 520, rent 130 to 240, prestige 4 to 5

5. Set Genre Affinity Clearly

- Use realistic boosts by venue style.
- Good starting pattern:
 - Favorite genre: +0.12 to +0.20
 - Secondary genre: +0.06 to +0.12
 - Neutral: 0
 - Weak fit: -0.05 to -0.12
- Avoid extreme negatives at launch.

6. Promo Packages

- Keep 3 to 4 options, each clearly stronger and pricier.
- Suggested shape:
 - Low: cost 10 to 20, boost 0.05 to 0.10
 - Mid: cost 25 to 40, boost 0.11 to 0.18
 - High: cost 45 to 70, boost 0.19 to 0.28

7. Scene Events Editor

- Keep 5 to 8 enabled events.
- Mix positive and negative outcomes.
- Good chance bands per event:
 - Common: 0.10 to 0.18
 - Uncommon: 0.05 to 0.09
- Keep total enabled event chance pressure moderate to avoid chaos.

8. Featured Guest Bonus

- Enable this to promote current artists.
- Strong starting values:
 - Money Bonus: +15 to +30
 - Fame Bonus: +1 to +3
 - Scene Cred Bonus: +1 to +3
 - Fan Trust Bonus: +0 to +2

9. Simulate Night Before Saving

- Use `Simulate Night` with 3 lineup types:
 - Budget lineup in small venue
 - Balanced lineup in mid venue
 - Premium lineup in large venue
- Check that outcomes feel different but fair.

10. Save and Publish

- Click `Save Design` (autosave can still be on).
- Only use `Reset All Players` when you make major balance changes and want a clean season for everyone.

3. Recommended Starter Blueprint (8 Bands, 5 Venues)

Bands:

- 2 entry bands: draw 45 to 70, fee 35 to 70
- 4 core bands: draw 75 to 130, fee 75 to 150
- 2 headliners: draw 135 to 170, fee 160 to 210

Venues:

- 1 entry venue: cap 80, rent 30, prestige 1
- 2 growth venues: cap 160 to 220, rent 70 to 120, prestige 2 to 3
- 1 prestige venue: cap 320 to 420, rent 160 to 220, prestige 4
- 1 showcase venue: cap 450 to 550, rent 220 to 280, prestige 5

This setup usually creates clear progression without early dead-ends.

4. Fast Quality Checks

Run these checks after edits:

- Profit sanity:
 - Budget lineups should not always lose money.
 - Premium lineups should need good fit/promos to pay off.
- Attendance sanity:
 - Genre-fit lineups should visibly outperform mismatched lineups.
- Risk sanity:
 - Scene events should add flavor, not dominate every result.
- Win pace sanity:
 - Typical players should approach thresholds late in the season, not in week 1.

5. CSV Bulk Management

Bands CSV columns:

- `id,stageName,genre,draw,fee,reliability,crowdEnergy,enabled`

Venues CSV columns:

- `id,name,capacity,baseRent,prestige,enabled,genreAffinity`
- `genreAffinity` format uses `|` separator, for example:
 - `rock:0.15|indie:0.1|punk:-0.05`

Recommended workflow:

1. Export current CSV.
2. Edit in spreadsheet.
3. Import CSV back.
4. Run Simulate Night checks.
5. Save Design.

6. Troubleshooting

If players always lose money:

- Lower venue rent.
- Lower average band fees.
- Increase draw on mid-tier bands.
- Reduce negative scene event severity.

If players win too easily:

- Raise rent on high prestige venues.
- Increase fee on top 2 bands.
- Reduce top promo boost slightly.
- Raise win thresholds moderately.

If results feel random/noisy:

- Reduce extreme scene event deltas.
- Tighten genre affinity values.
- Keep reliability in a narrower mid-high band.

7. Launch Plan For Your Initial Content Size

For 6 to 10 bands and 4 to 6 venues:

1. Start with 8 bands and 5 venues.
2. Balance until Simulate Night feels stable.
3. Add 1 to 2 new bands only after a week of live play feedback.
4. Add a new venue only when mid-tier progression feels solved.

This keeps the economy readable and prevents early balance drift.
